Application/Control Number: 10/820,313

Art Unit: 3747

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-2 and 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hess in view of Benson.

Hess and Benson apply as per the previous office action.

It would have been obvious to modify Hess by increasing the pressure to coking injectors (lean output) because Benson taught that this was a possible cure which would not effect injection "on" time.

Claims 4-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Applicant's arguments filed May 5, 2005 have been fully considered but they are not persuasive.

In particular, the examiner made several calls to the applicant's representative and suggested language that should be added to the independent claims in order to clarify that the repeated fuel pressure increase was done after a fixed period of time. The suggested amendments were left, in detail, on the voice mail of applicant's representative. No response to these calls was received before this case had to be acted upon. To reiterate the examiner's concerns, it is necessary to define the time of repeating the pressure increase in a way that excludes the use of the feedback taught

Art Unit: 3747

by Hess. Simply stating that the increase will be repeated would have been obvious since the repetition could occur due to a second air/fuel ratio signal which required more fuel and thus higher fuel pressure (lean signal).

Because Claim 3 was indicated as containing allowable subject matter, the examiner has made this rejection non-final.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carl S. Miller whose telephone number is 703-308-2653. The examiner can normally be reached on MTWTHF.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry YUEN, can be reached at 571-272-4856. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
